

KinderTrack Release Notes

Version: 3.14.7

SPR #	State	Problem	Solution
Standard Fixes			
17525	CA		Fixed a bug where attendance was not being saved when a payment was deleted (vs. superseded).
17591	CA		Fixed a bug in the calculator where contracted providers were not being pro-rated correctly if the payment and schedule both started mid-week.
18066	CA	The rate type dropdown is not correctly filtering by the date.	Modified population of the dropdown to use the start date of the schedule to determine which rates to display.
18238	CA	Currently the system is deducting fixed amounts from rate types. If the deduction is more than the rate itself, it causes the rate to result in a zero amount which results in a zero payment calculation.	The calculator logic has been updated for the fixed amount sibling reduction. The logic will now attempt to deduct the fixed amount from the rate retrieved; if this amount is less than or equal to zero, the sibling reduction will not be applied and the normal rate will be used.
18290	CA	Invoice creation was failing when there was a transaction that did not have a program assigned. (i.e. cash payment to past due/payment plan balance)	Fixed error so that if no program is assigned to the transaction, the invoice will put an empty string for the program name.
18314	CA		Modified new Family Fee Module to include received and rejected payment when calculating adjustments.
18394	CA		Fixed bug in new Family Fee Module when attempting to enter a transaction with no amount.
18422	CA	The payment page randomly crashes when trying to do cut and paste.	Fixed a bug in the grid so the application won't crash on cut and paste.
18425	CA		Modified the BioMetric export to include all days when the schedule is varying.
